

## 2.1 Sub-corpora

As explained in the [section](#) about the creation of the sub-corpora, you can work with either the full corpus WUS or you can select different sub-corpora that mainly depend on the main language within the chat. You find the list of sub-corpora in the bottom left in ANNIS.

The list of sub-corpora is also a good starting point to get information about available fields for your query, to get examples and statistics.

### Tokens and messages per sub-corpus

Next to the name of each sub-corpus, you see the number of messages (marked as "Texts") and tokens. You can use these figures for statistics.

**Please watch out:** If you work with corpora where not all participants gave their [permission](#) to use their texts, the figure for tokens is off because messages without permission were replaced by texts like *redactedQ12tokens55characters*. These texts count as tokens, too. If you need statistics that depend on the number of tokens in a (sub-)corpus, you are advised to work with corpora with the extension [\\_DEMOG](#).

### Information about the corpus

When you press on the small <i> for information to the right of each (sub-)corpus name, you receive more information about the corpus. More specifically:

- Some statistic information about the corpus including a link at the bottom
- If you need specific information about an individual chat, you can select the chat instead of the corpus in the top left to get information such as number of messages, number of speakers, etc. This is also an easy way to see which chats are integrated in this sub-corpus.
- Possible queries on the right
